Emergency Helpline Directory

Project proposal for topic approval

Student	Aryan Yadav	**Date**	5 November 2026
Course	Web Projects, B.Tech I Semester	**Status**	Draft for approval
College	Jagannath University, Mirai School of Technology		

1. Problem

In an emergency, people lose time finding the right number. Numbers are spread across government sites, differ from one area to another, and are hard to recall under stress.

2. Objectives

- Show the right numbers for a chosen area and situation.
- Show each number as a tap-to-call button on a phone.
- Give a short "what to tell the operator" checklist for each situation.
- Let users save their own emergency contacts on the device.
- **Success target:** the right number in three taps or fewer, in at least 4 of 5 test runs.

3. Scope

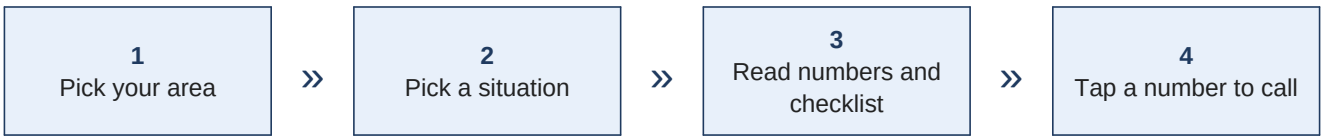
Phase 1 covers national numbers and the numbers for one chosen area.

In Phase 1	Not in Phase 1
Situation search and area picker	Calling, or sending location, from the app
Tap-to-call buttons and what-to-say checklists	User accounts, a server or cloud sync
My contacts, saved on the device	Languages other than English
Offline use after the first load	Live ambulance or hospital bed availability

4. Pages

Page	What it does
Home	Area picker, search box, and a button for national number 112
Situations	Injury, fire, crime, women's safety, child safety and disaster
Results	Numbers with tap-to-call, checklist, source and last-checked date
My contacts	Add, edit and delete personal contacts stored on the device
About	Data sources, last update date and full disclaimer

5. How it works



6. Timeline

Week	Work
1	Topic approval, data collection and verification
2	Wireframes and HTML layout for Home, Situations and Results
3	JavaScript for area picker, situations and search
4	Tap-to-call, what-to-say checklists and My contacts
5	Testing on phone and desktop, offline check, bug fixes
6	Final data check, documentation and demo

7. Testing

- Tap-to-call on an Android phone. On desktop, numbers are shown as text.
- Offline check: turn on airplane mode after the first load.
- User test with five people: record time and success. Check every number against its source.

8. Risks

Risk	How it is handled
Wrong or outdated numbers	Official sources only, a last-checked date on each number, a data check before the demo
App treated as a replacement for 112	Visible disclaimer on the Home and Results pages
Local numbers missing in most areas	Phase 1 covers chosen areas; other areas show national numbers
